Conclusion:

The project car management system (CMS) is for computerizing all the data of the office. The software takes care all the requirement of an average car rental company and is capable to provide easy and effective storage of information related to customers that takes their service.

During our database management course we have learned about the basics of database design. This project gave us the opportunity to try our new skills in practice. While doing this project we also gained deeper understanding on database design and how it can be implemented in real life situations. We believe we can use our database designing skills also in other higher level subject like Advance Database Management System.
